November 21, 1974

Ohio Rubber Company, Willoughby
COE Application No. OH 070 OX2 2 000366

The Ohio Rubber Company, Willoughby, Ohio, had originally submitted a COE application for wastewater discharge in 1971. In June, 1973, a temporary "dry well" system was installed which eliminated discharge of industrial waste into the Willoughby storm sewer. At the present time, the Company has applied for a permit to install for pretreatment facilities prior to discharge to the Willoughby Sanitary Sewer System.

Since no wastewater is presently discharged and the sanitary tie-in is pending, there will be no discharge permit issued to this company.
